

**Saygus** is an innovative leader in the communications industry specializing in the design, development and distribution of the world's most advanced smartphones. Our very first handset was the *FIRST PLACE WINNER* of the cellular industry's top award given out by the *Consumer Electronics Association*, the CES Design & Engineering International Innovation Award. This made Saygus the #1 smartphone in the world! Our new **V Squared** was also announced as an International Innovation Award recipient for 2015!

During the *Consumer Electronics Show (CES)*, held in January each year and considered the top electronics show in the world, the Saygus V Squared won multiple achievement awards! Android Authority made us one of their *Top Ten "Best Pick Award"* of the show and Gizmag recognized the **V Squared** as one of the CES innovations that they expected to be 'the next big thing' with their "*Best of CES*" tribute.

Our objective has been to put the power of a laptop and the versatility of a smartphone in the palm of every hand. The **Saygus V Squared** features:

- 128 GB memory on board with 2 Micro SD slots for 256 GB SanDisk memory cards up to 640 GB total memory
- Dual Sim Cards allowing two different cell phone carriers to operate on the same phone
- First to market "sunlight" viewable screen technology
- Longest Battery life with 28 hours of talk time and a battery-saving chip that boosts battery life by 50%
- Wireless HD for beaming of games, videos or movies to TVs or projection screens without WiFi
- 21MP Rear Facing and 13MP Front Facing camera with Optical Image Stabilization and Auto Focus
- Multi-Boot Operating System Capability with a Micro SD card, switching the phone to an OS platform
- Water proofed circuit boards
- Fractal Antenna Boosting Technology
- Noise Cancelling Cypher Sound Technology, Harman Kardon Sound Technology with 3D Audio
- Android OS (version Marshmallow 6.0), NFC (for Goggle Wallet and sharing photos)
- OEM unlocked technology allowing programmers and application developers to write code/programs freely

Our mission is to create the "**Ultimate Convergence Device**" and the **V Squared** is the perfect first step to our '*smartphone on steroids*' objective. We will continue to break the mold and provide more computing capacity, more capability, more battery life and more features as our new models are launched in the coming years. **Saygus** expects to consistently set the standard for smartphones and lead the world in personal and business mobile computing.

**Saygus builds smartphones we believe people want to buy. Our competitors build smartphones they think they can sell.** That is our difference.

It's just 18 words, but it clarifies that **Saygus** and its competitors are worlds apart. Here at **Saygus**, we build the smartphones we want. It's that simple. We are committed to continually providing smartphones to users around the world with the most innovative ideas and designs, making their smartphones more personal and user friendly as we build the worlds best handsets.

THERE ARE NO SMALL SMARTPHONE COMPANIES... so get ready for Saygus!

Best regards,

Chad Sayers
